

HER  
1529

## Identification

<i>Genre</i> Cellulophaga	<i>Espèce</i> baltica	<i>Sous-espèce</i>	<i>Souche</i> 3
------------------------------	--------------------------	--------------------	--------------------

*Autres désignations*

## Conditions de croissance

<i>Temp.</i> Room temp.	<i>Milieu</i> Zobell agar MLB broth	<i>Aérobie/Anaérobie</i>	<i>Agitation</i> Agitation needed	<i>Autres</i>
----------------------------	---	--------------------------	--------------------------------------	---------------

## Lysogénie

## Sensibilité phagique

HER 529 (ST)

*Référence*

*Remarque*

Takes three days to grow on Zobell agar pates, 16-20 hours to reach stationary phase in MLB, doubling time in MLB is 2-3 hours.

## Historique

*Historique*

**Isolated by**

Dr. Karin Holmfeldt, Department of Biology and  
Environmental Science, Linnaeus  
University, 391 82 Kalmar, Sweden

**Date**

February 2000

**Received from**

Prof. Matthew Sullivan, Center for Microbial Interface  
Biology, Ohio State University,  
484 W. 12th Ave. Columbus, OH 43210

**Date**

December 2016
